Client engager:

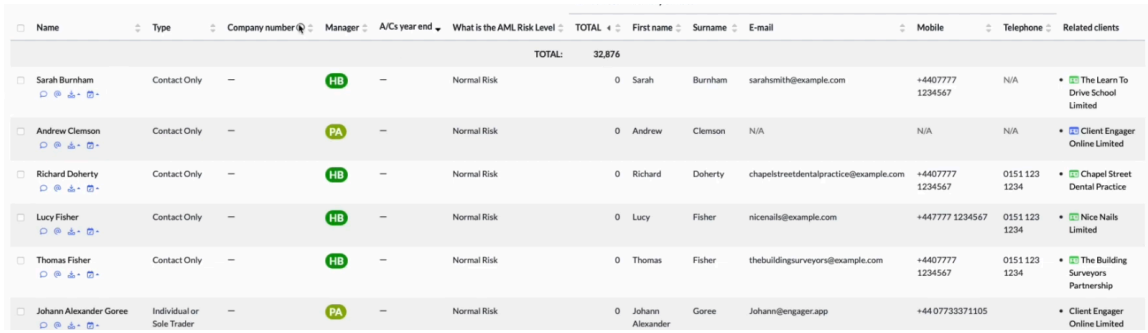

- The Dashboard UI is untidy.
- Card view of data lists instead of table view
- Color-coding things (Red is used when “Time is up”, for example)
- Useful notes section (users tend to forget stuff so this allows them to set custom reminders for themselves)

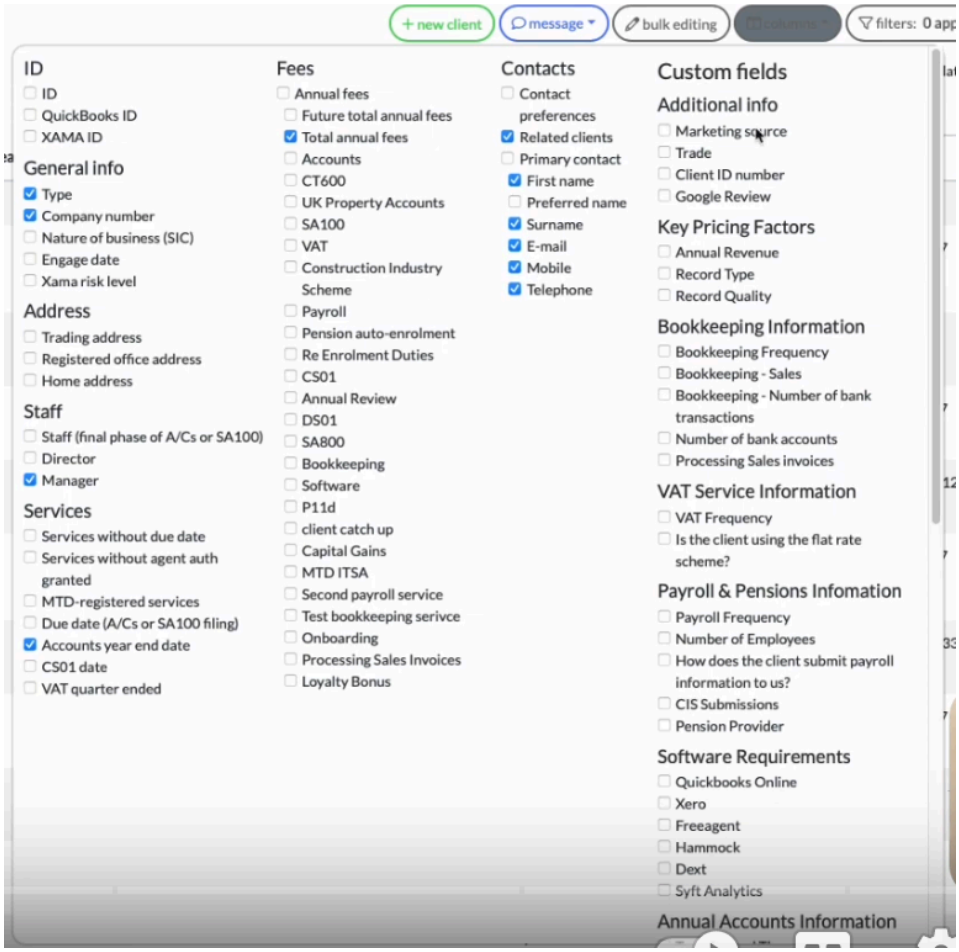

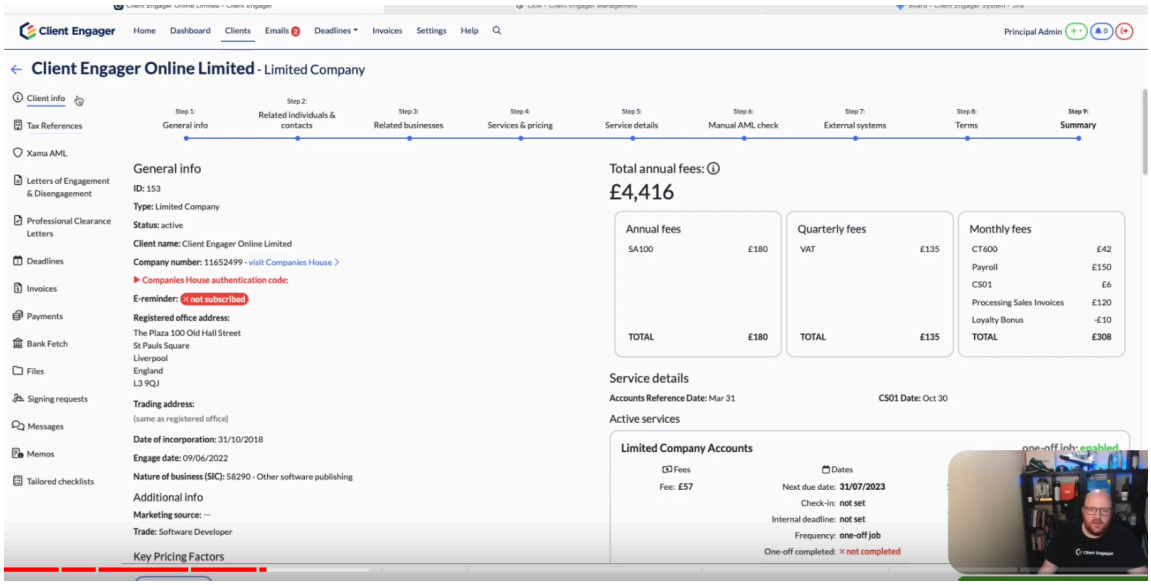

- Has a cog in the dashboard where you can freely show and hide the items that you want to see

- Has a metric bar where you can **manually create and update custom metrics.**
- **Clients tab:**

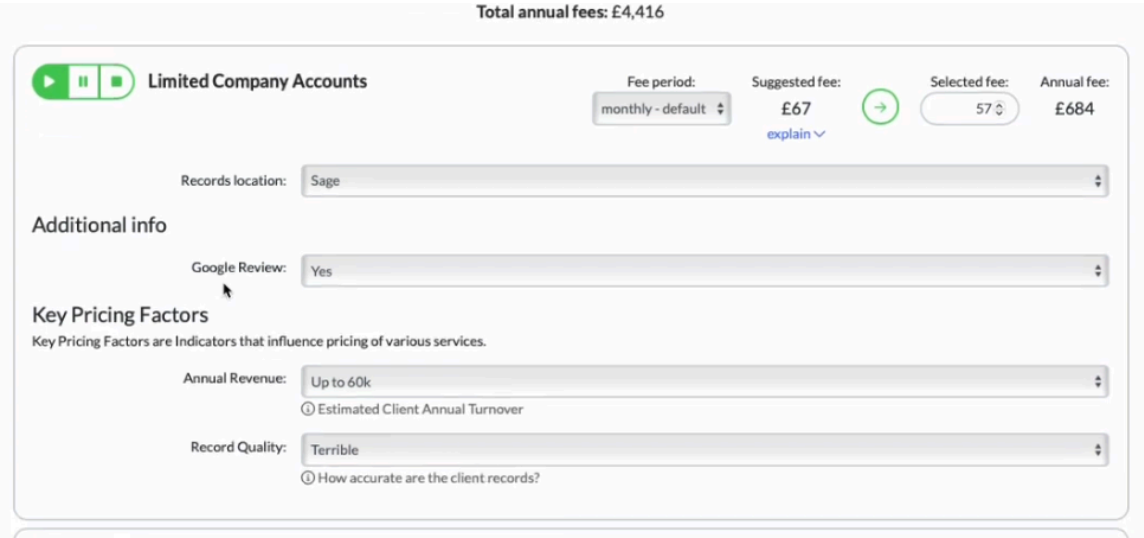

- 

- Can edit any kind of columns we wish. Really good for pages like these where there are a lot of custom fields.
- **—- START OF CLIENT SECTION—-**
- **Client details page:**
- 

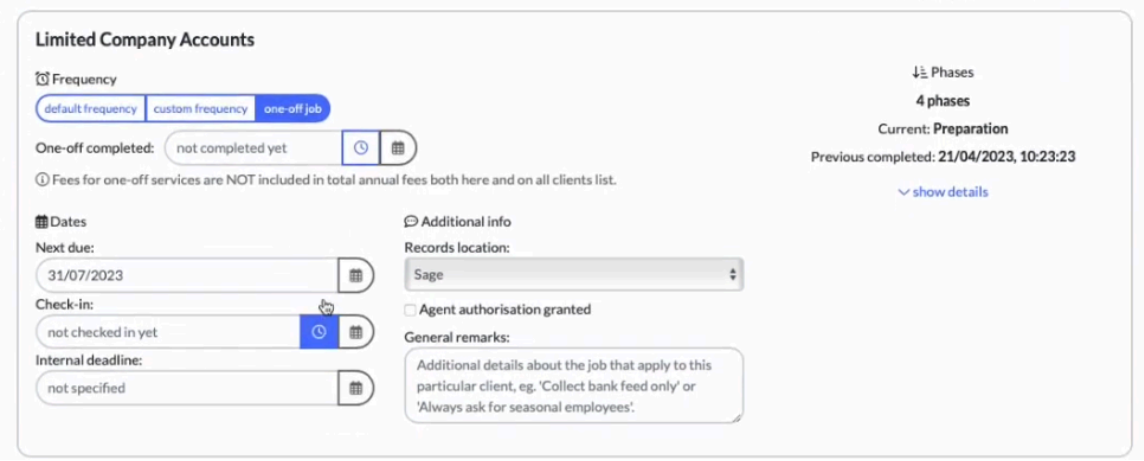

- On the left is the main menu bar and on the top is the menu for each individual sub-page.
- **Services and pricing sub-page:**
- Services and pricing top card row:

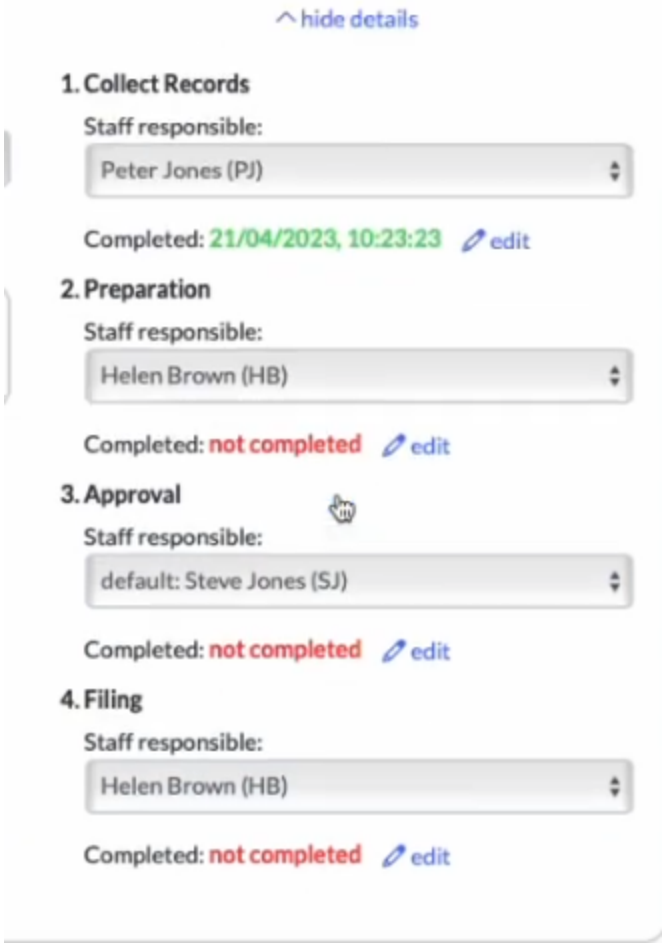

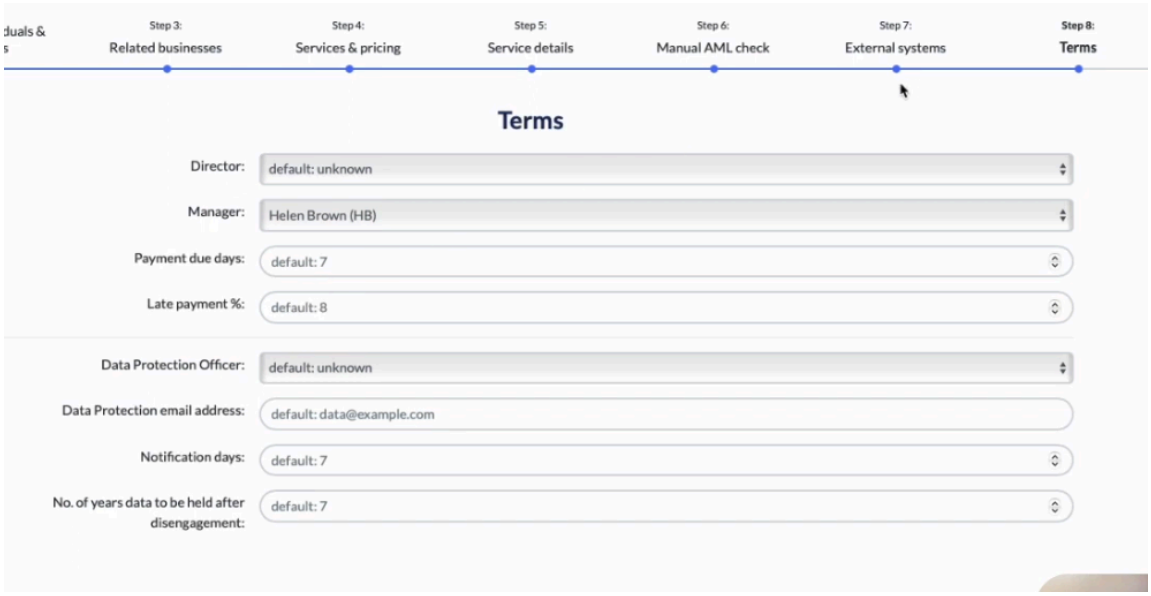

- **Each selected service looks like this:**

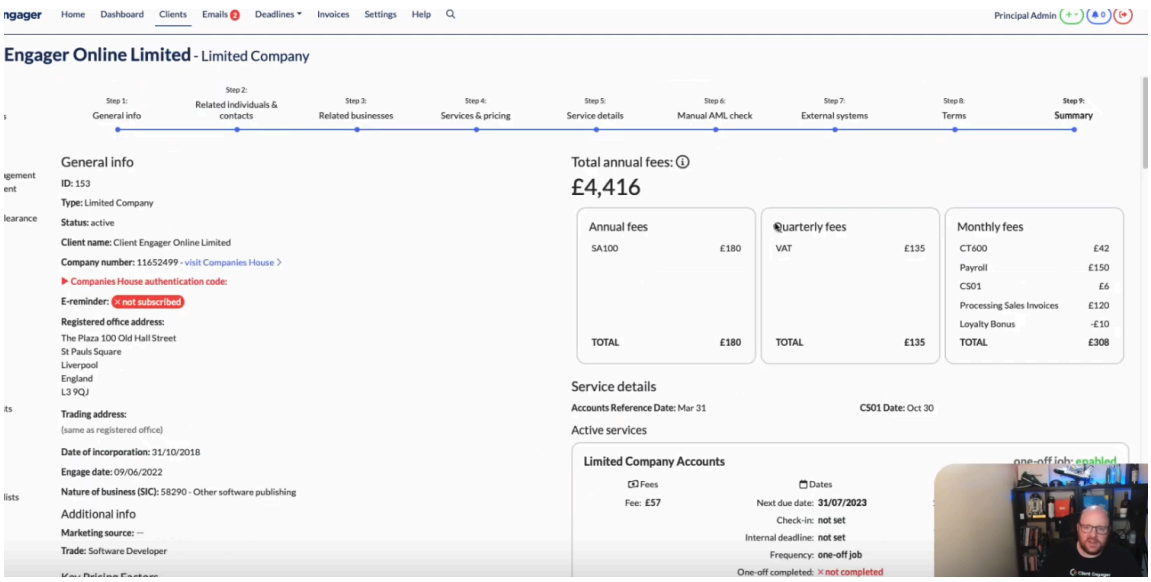

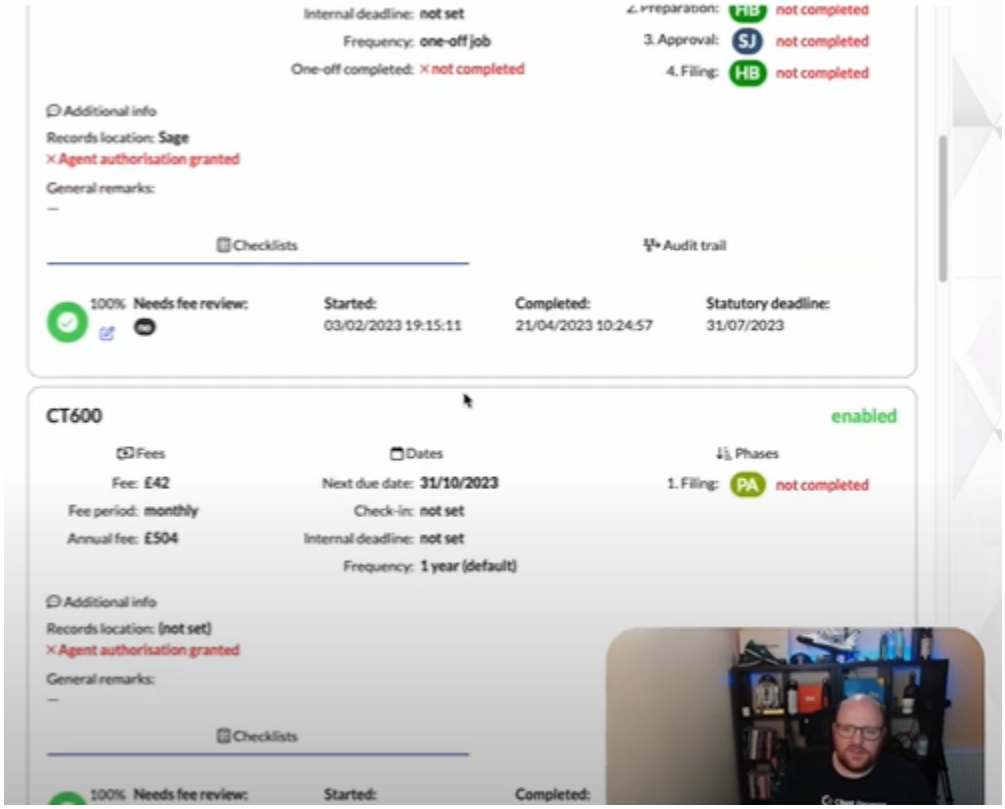

- **More in detail view:**

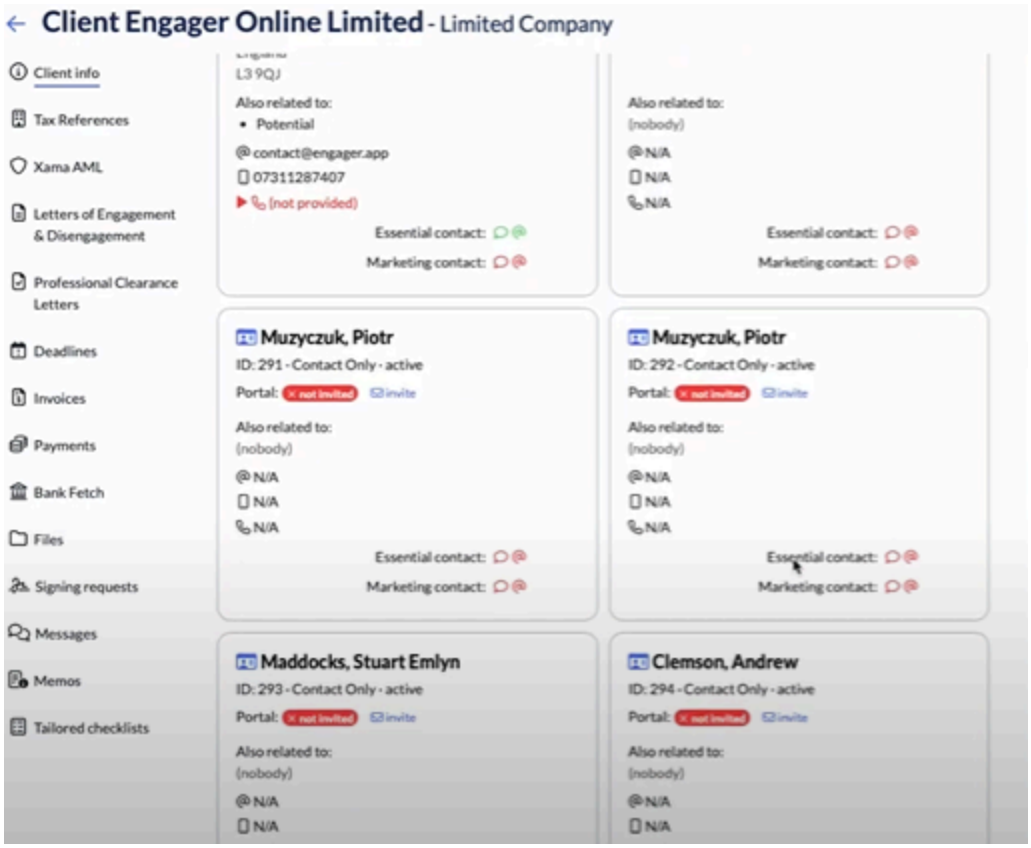

- **You can show details on the right to expand this:**

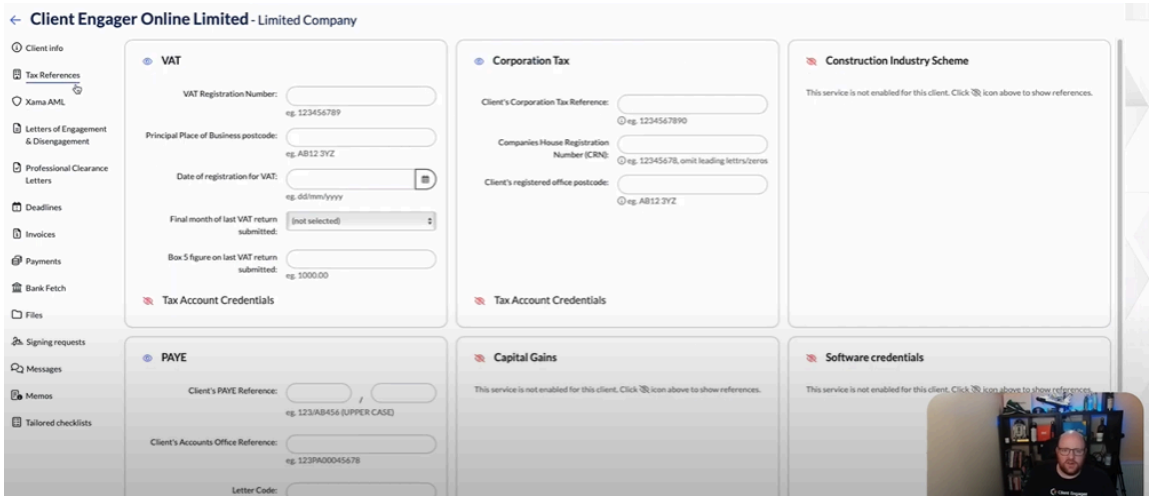

- 
hide details
1. Collect Records

Step 4: Services & pricing
Step 5: Service details
Step 6: Manual AML check
Step 7: External systems
Step 8: Terms
Terms
Director: default: unknown
Manager: Helen Brown (HB)
Payment due days: default: 7
Late payment %: default: 8
Data Protection Officer: default: unknown
Data Protection email address: default: data@example.com
Notification days: default: 7
No. of years data to be held after disengagement: default: 7
- **Summary:**

- 

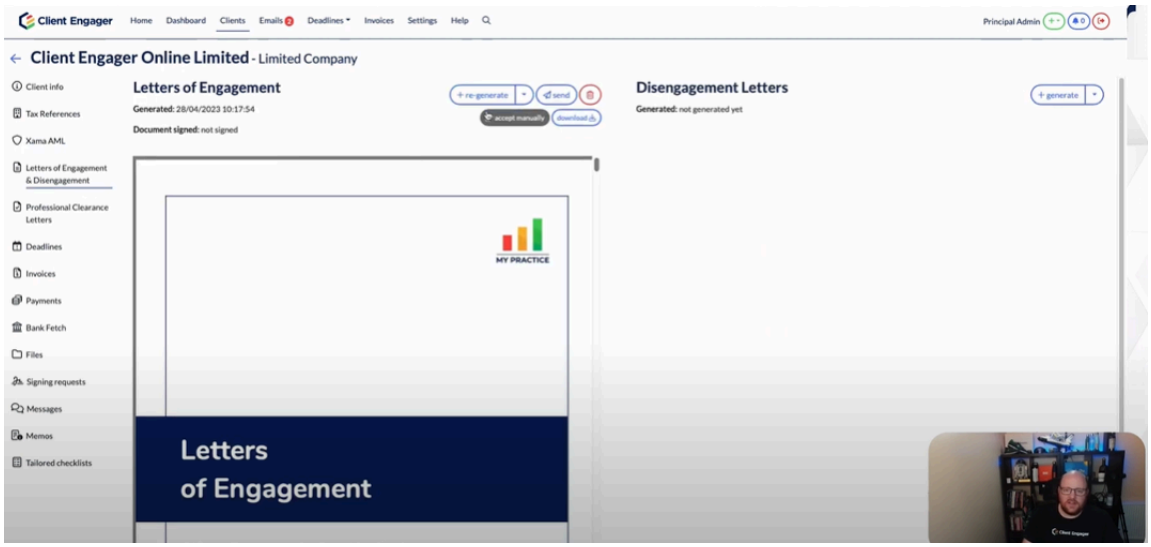

- On the right of this page you can see the list of selected services and their details:
- 

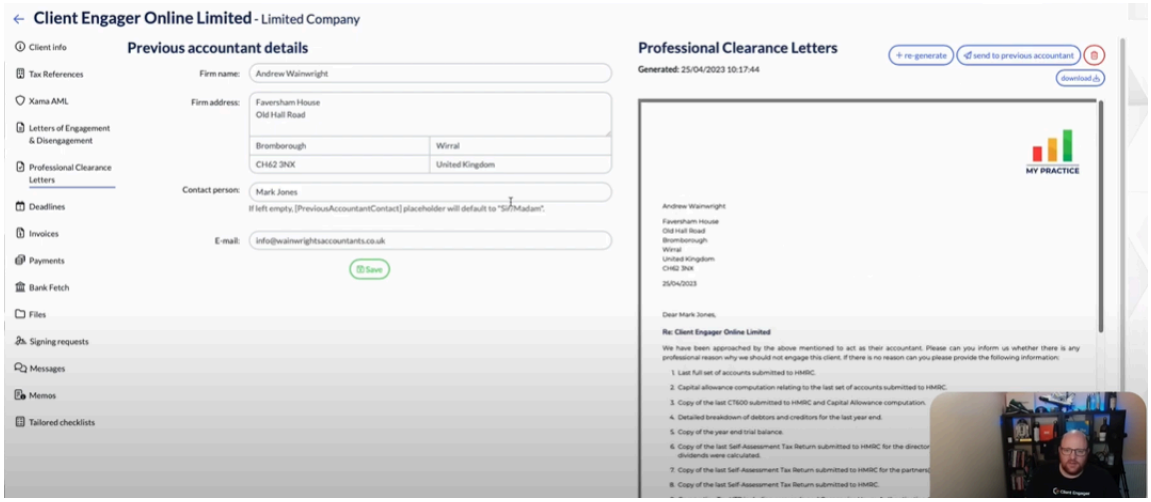

- While on the left you can see a list of all the people associated with this business:

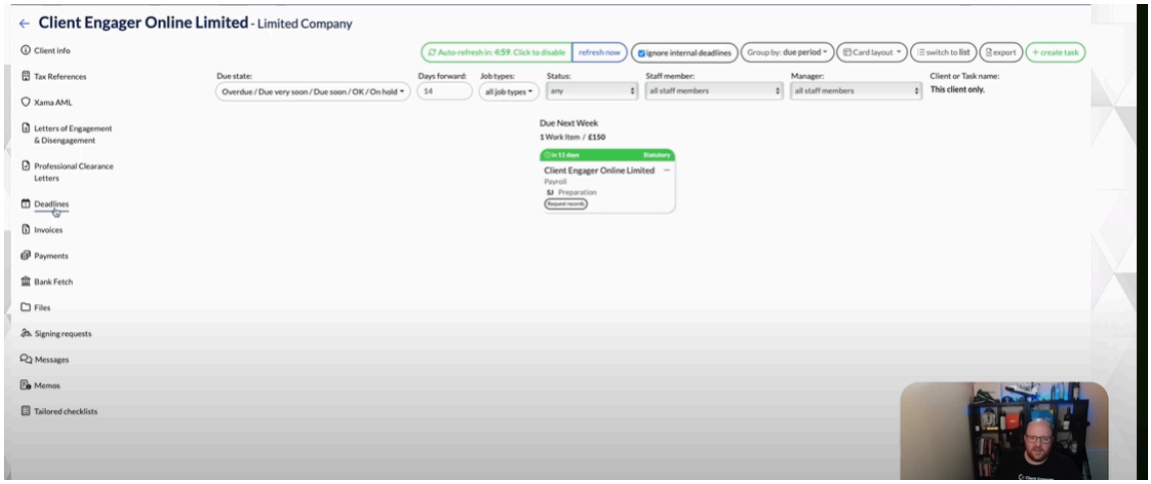

- 

- The tax references sub-page:
- 

- **Potential integration with Xama AML**
- **Templates section:**

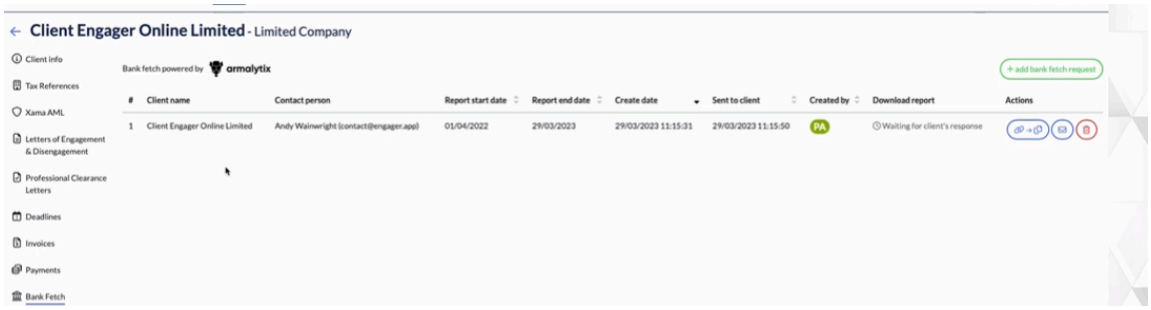

- 

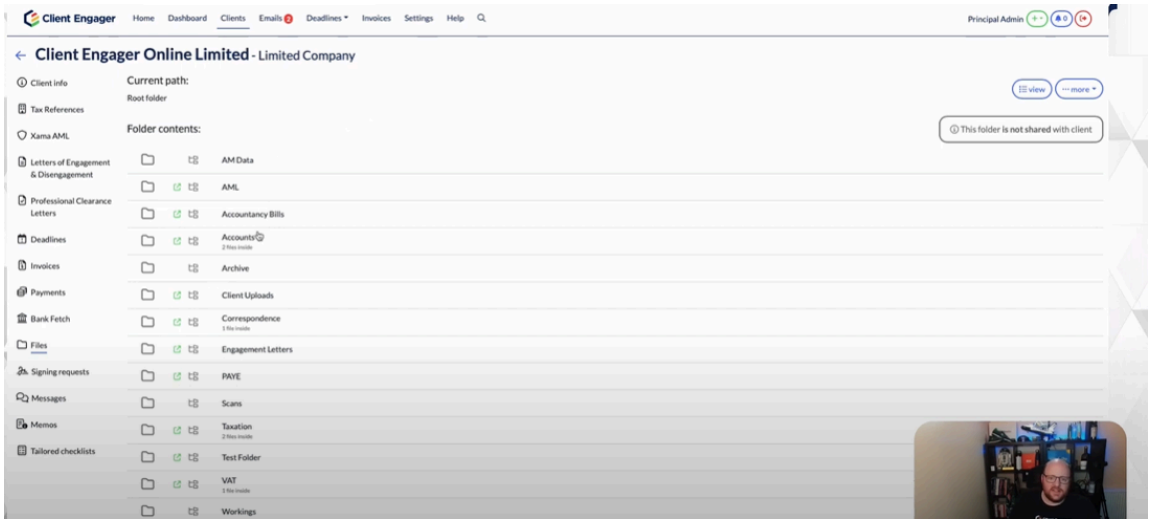

- **Previous accountant details and professional clearance letters:**
- 

- **Deadlines sub-page:**
- 

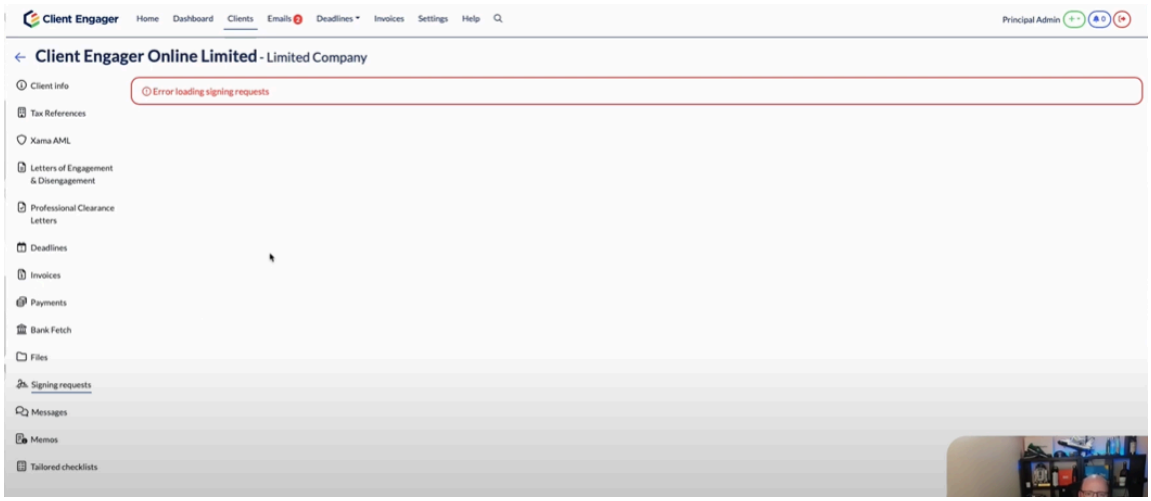

- **There is also an invoice page where you can integrate with quickbooks and pull in invoice history with the client.**

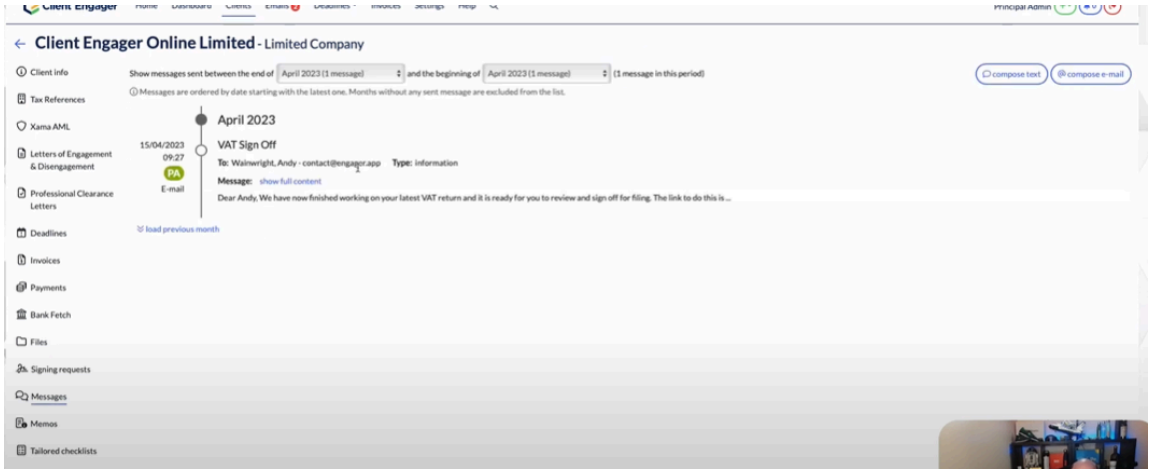

- **Payment section (uses an API integration with Crezco):**
- 

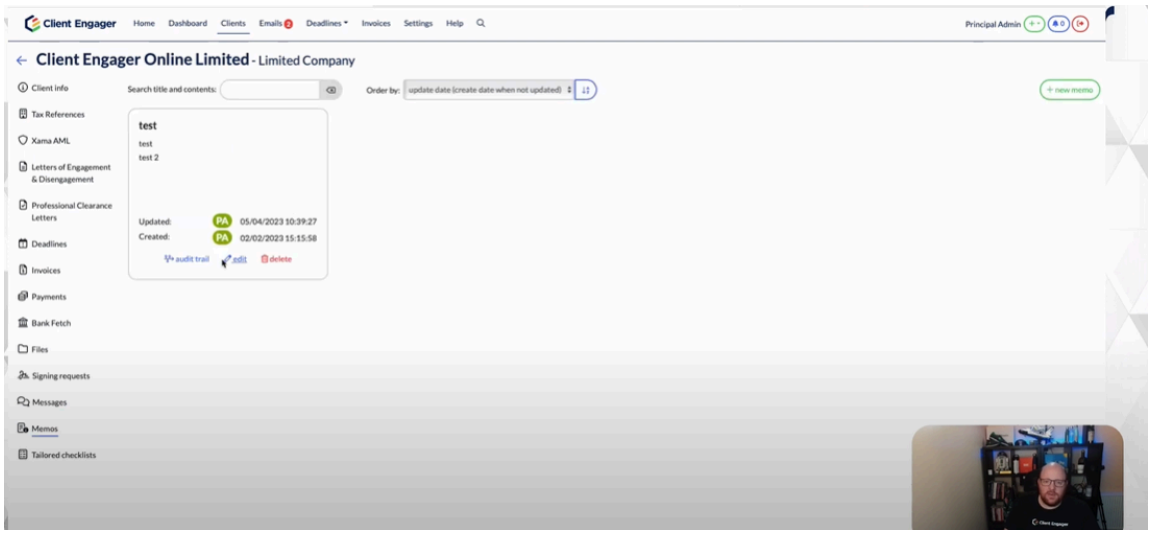

- **Bank statements section using integration with armalytix:**
- 

- **Folder system (storage for clients documents/work):**
- 

- **Signing requests sub-page (Any documents that are pending an e-signature will show up here and then you can e-sign them from this sub-page):**

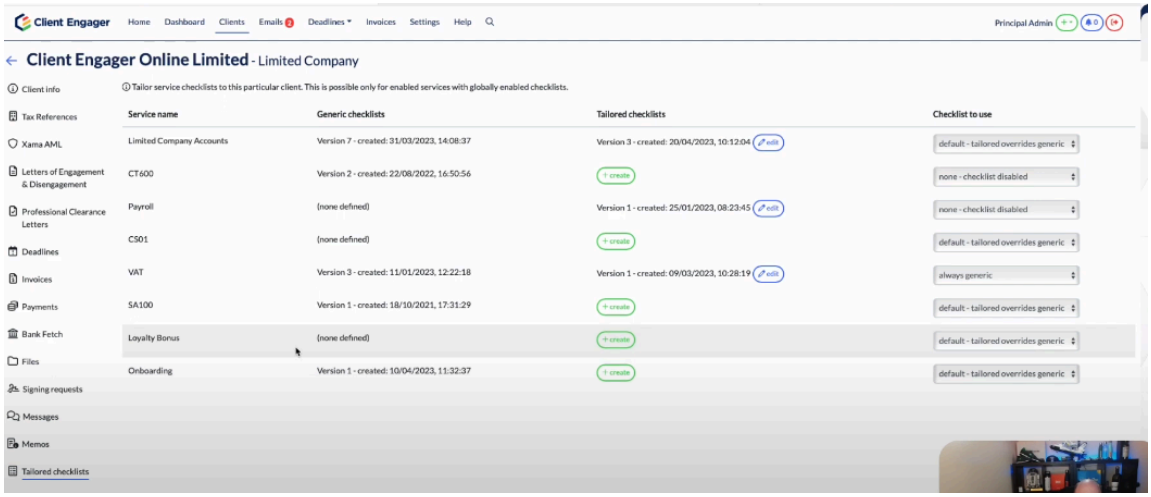

- 

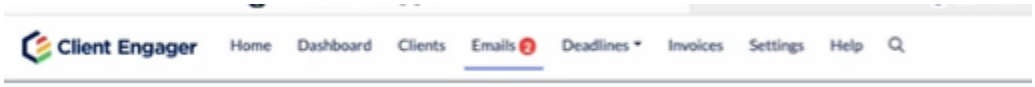

- **Message log that shows a timeline of communication with the client:**
- 

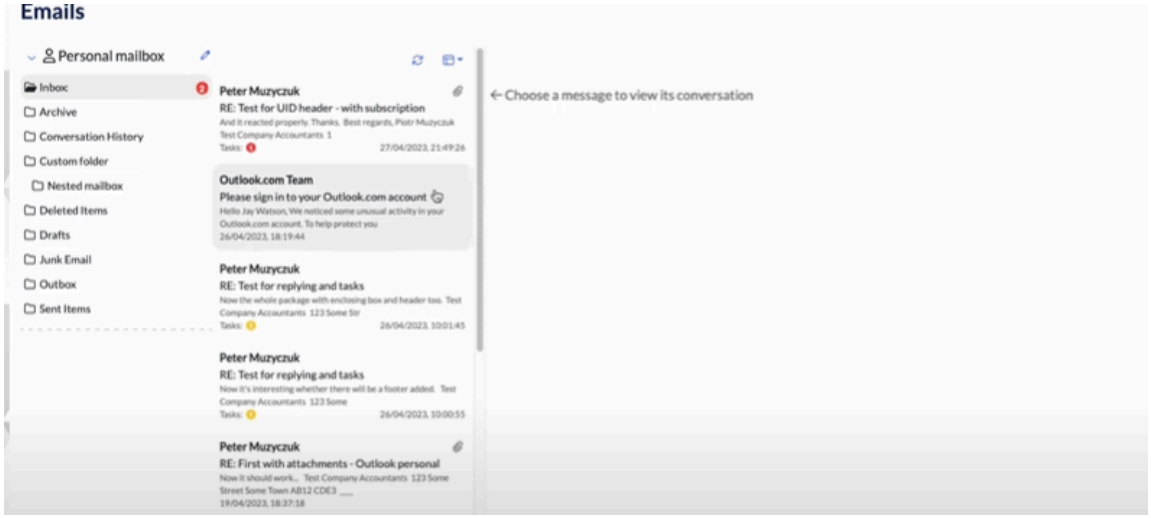

- **Memos sub-page where you can create edit and delete memos:**
- 

- **Tailored checklists page where you can see a list of**
    1. **Services**
    2. **The checklist being used for that service**

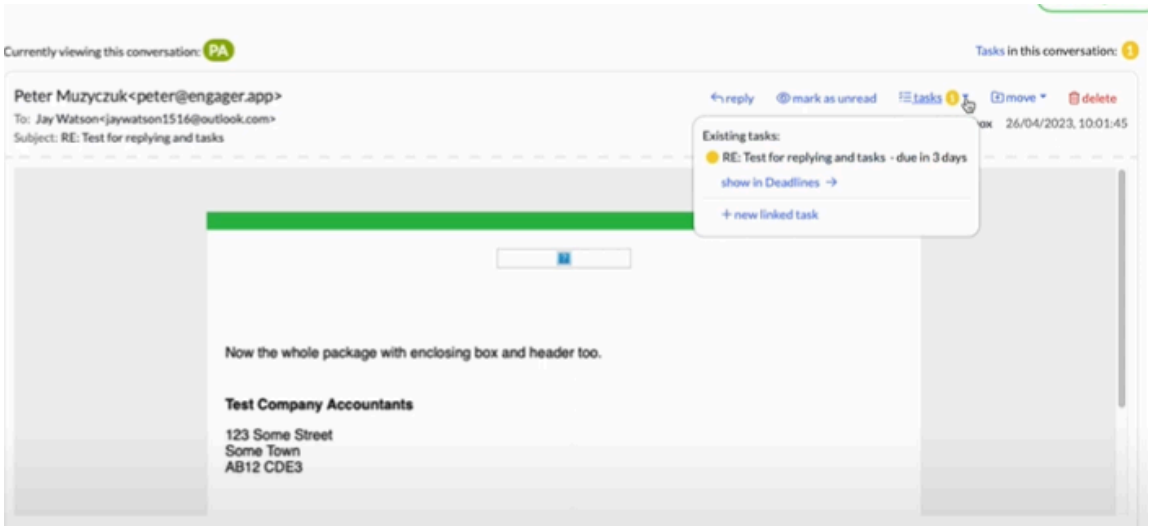

3. **The options to change the checklist or create a separate, tailored checklist for that client.**

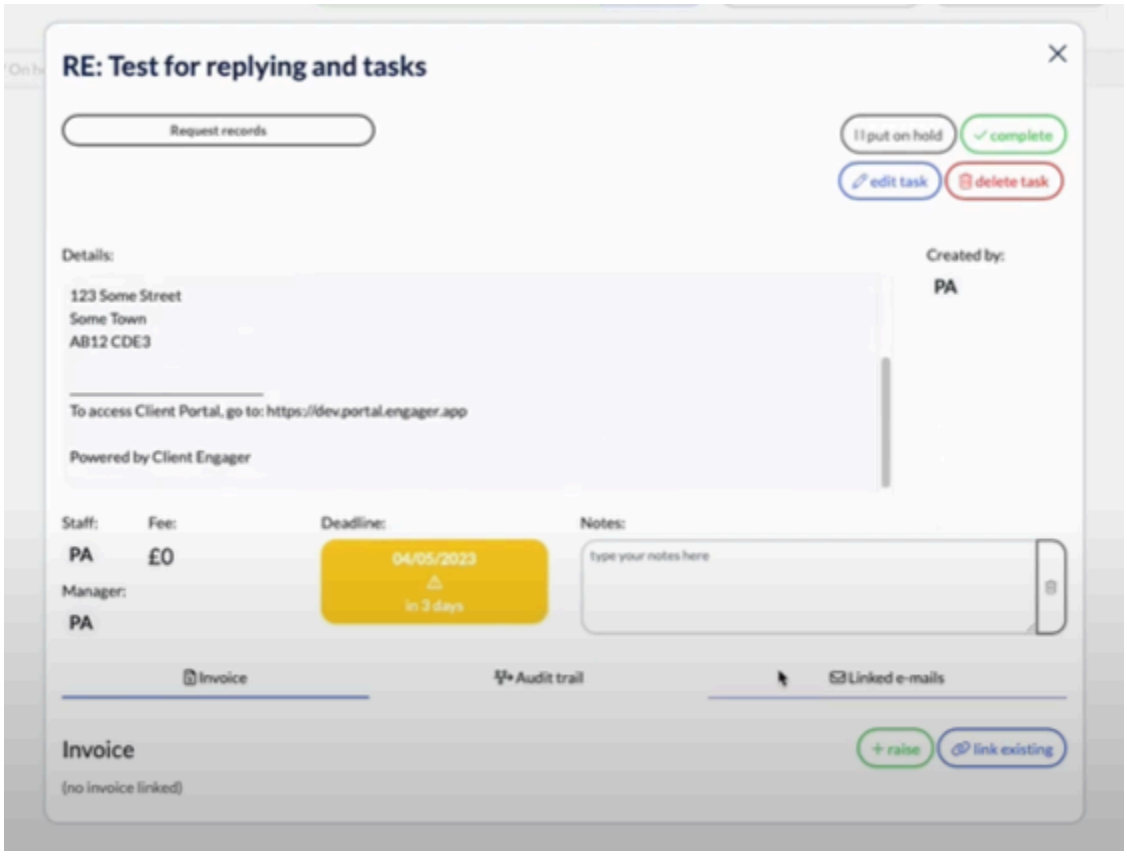

- 

- **—- END OF CLIENT SECTION —**
- Moving onto the emails page:
- 

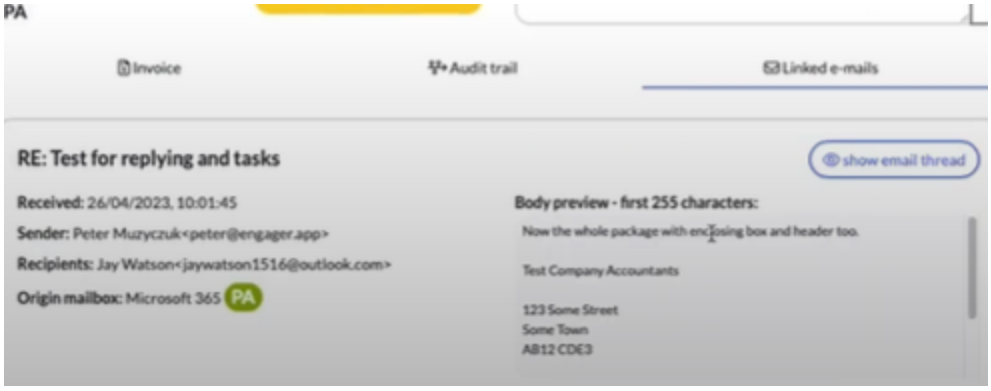

- Clientengager links with Microsoft 365 and brings in all of the emails into the app. In this way we can do all of our email-related tasks from the app itself.
- 

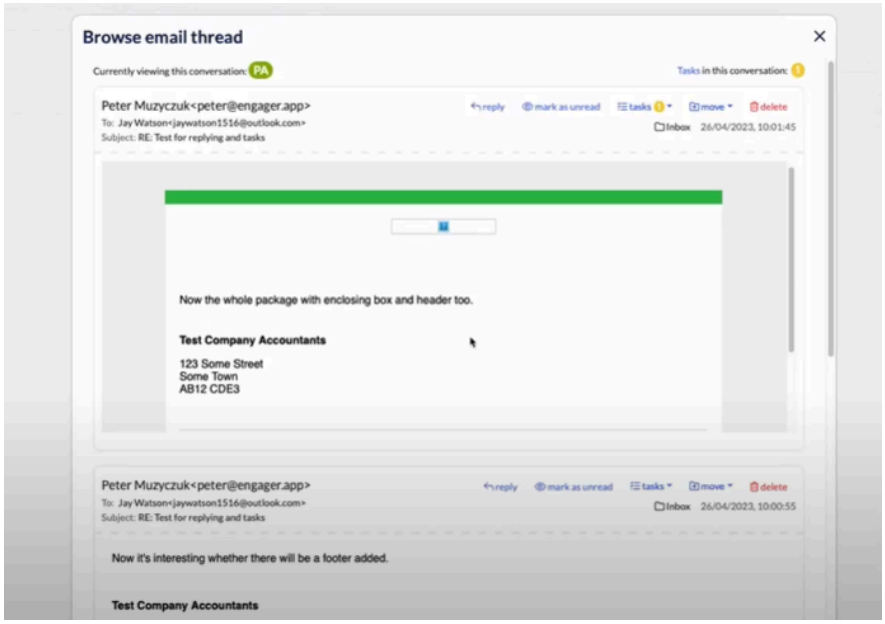

- On the left we can see a title called “**Personal mailbox”,** we can also add a **“Shared mailbox”** where us and the entire team shares a mailbox and we can work on emails together.
- You can assign task to a specific email which permanently associates that email to that task. Then you can navigate to that task from the email when you open the email in the app:

- 

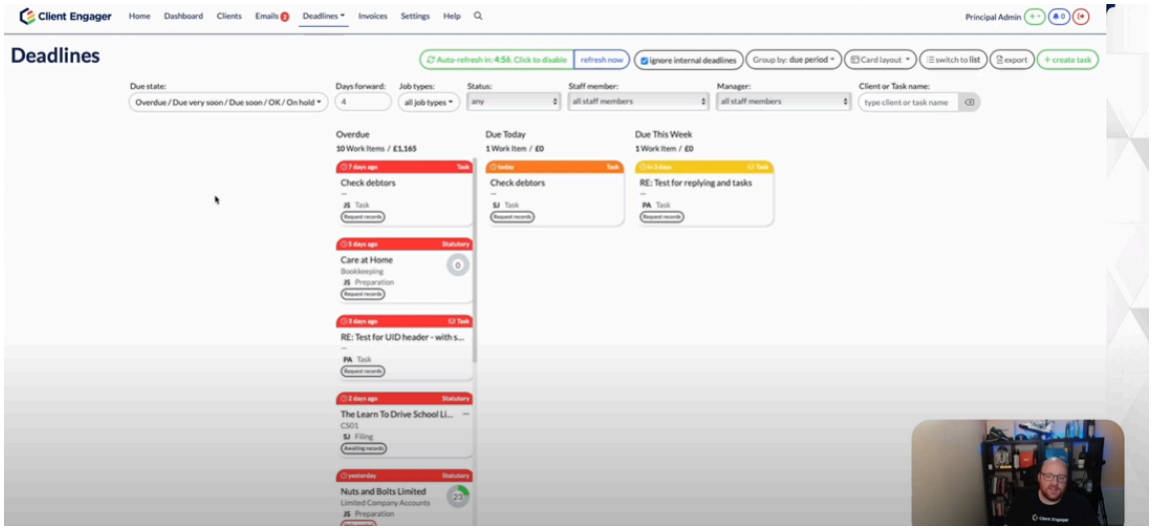

- When we click “Show in deadlines”, it opens the deadlines page from where we can click the task, and the task opens in a popup:
- 

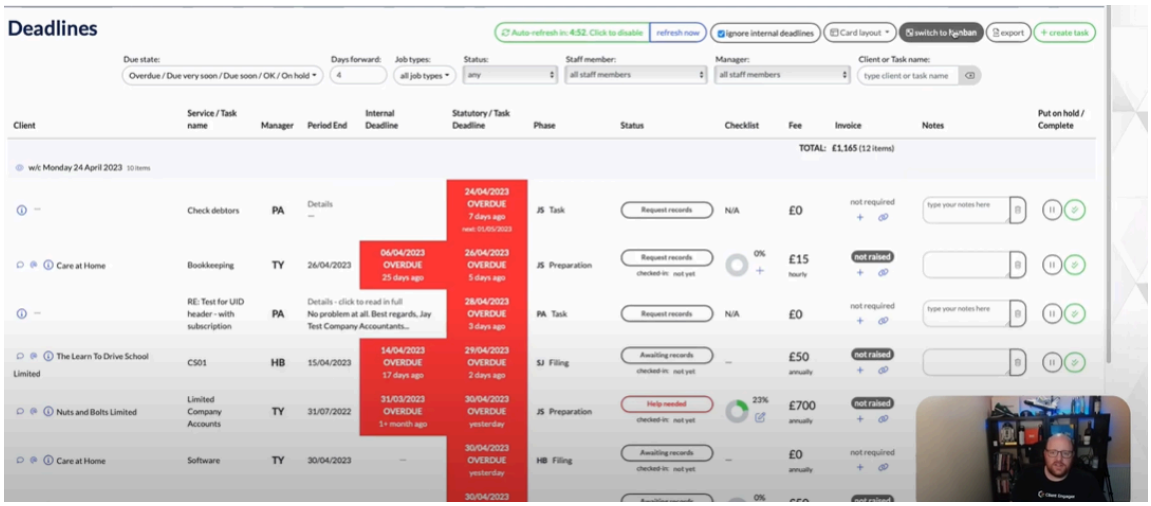

- We can click on “Linked emails” here and it will show all the emails associated with the task:

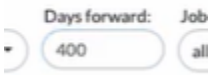

- 

- Clicking an email here opens the “Browse email thread” from where we can see the entire email **conversation/thread.**
- 

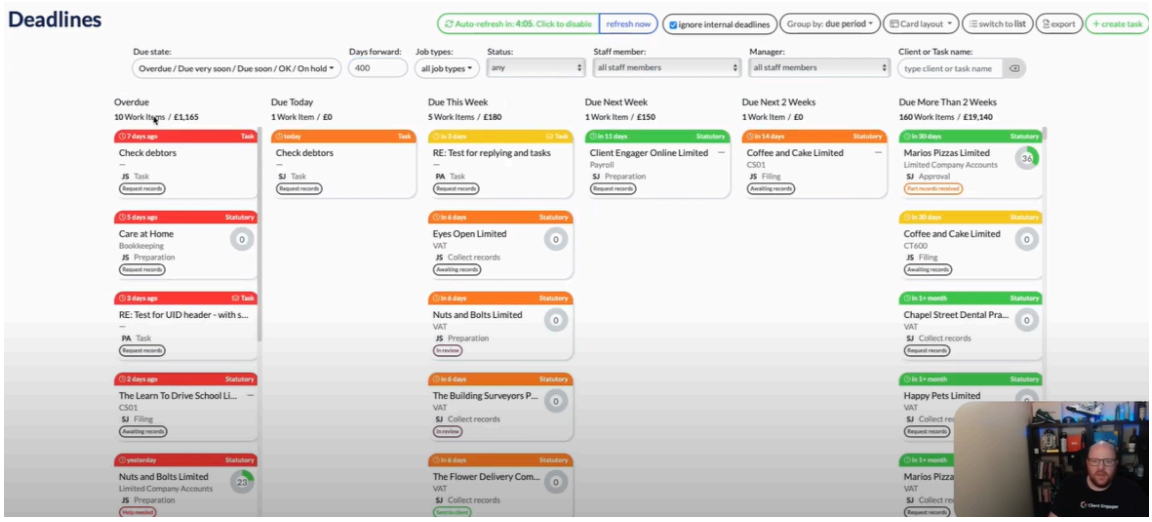

- We can freely interact with any email here.
- **—----DEADLINES PAGE—------**
- Kanban View:

- 

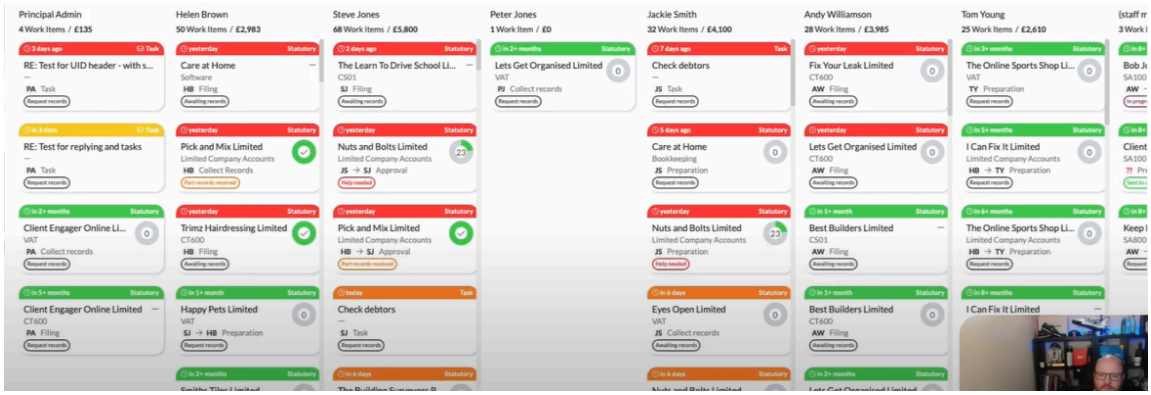

- We can also click a button a switch to list view:
- 

- We can add a high number in the “Days forward” filter:
- 

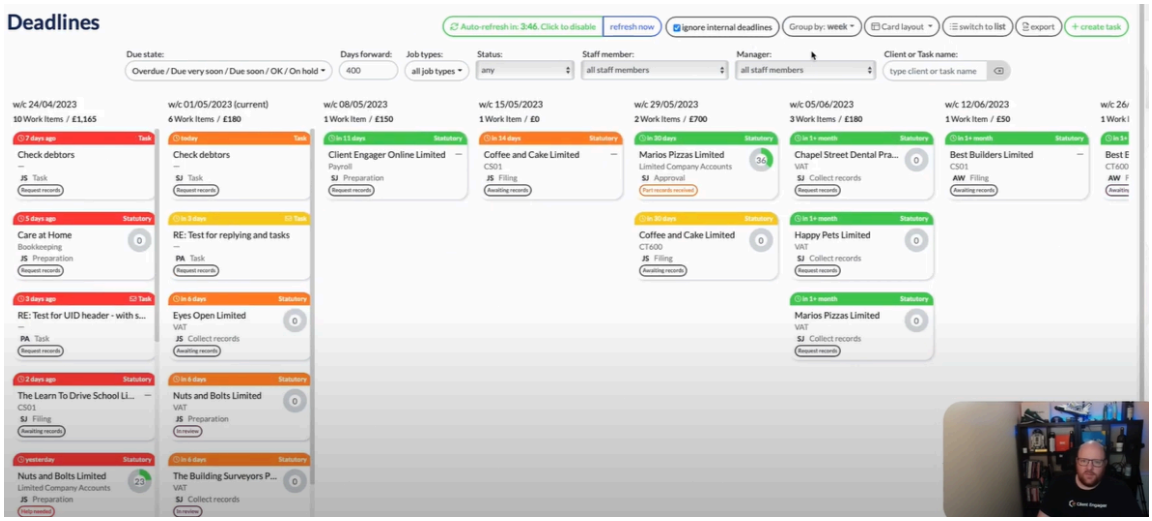

- And we will as a result get this view:

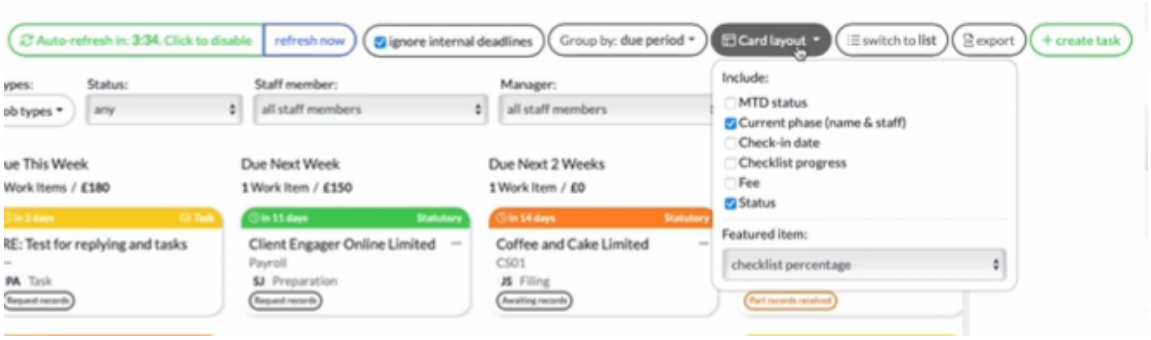

- 

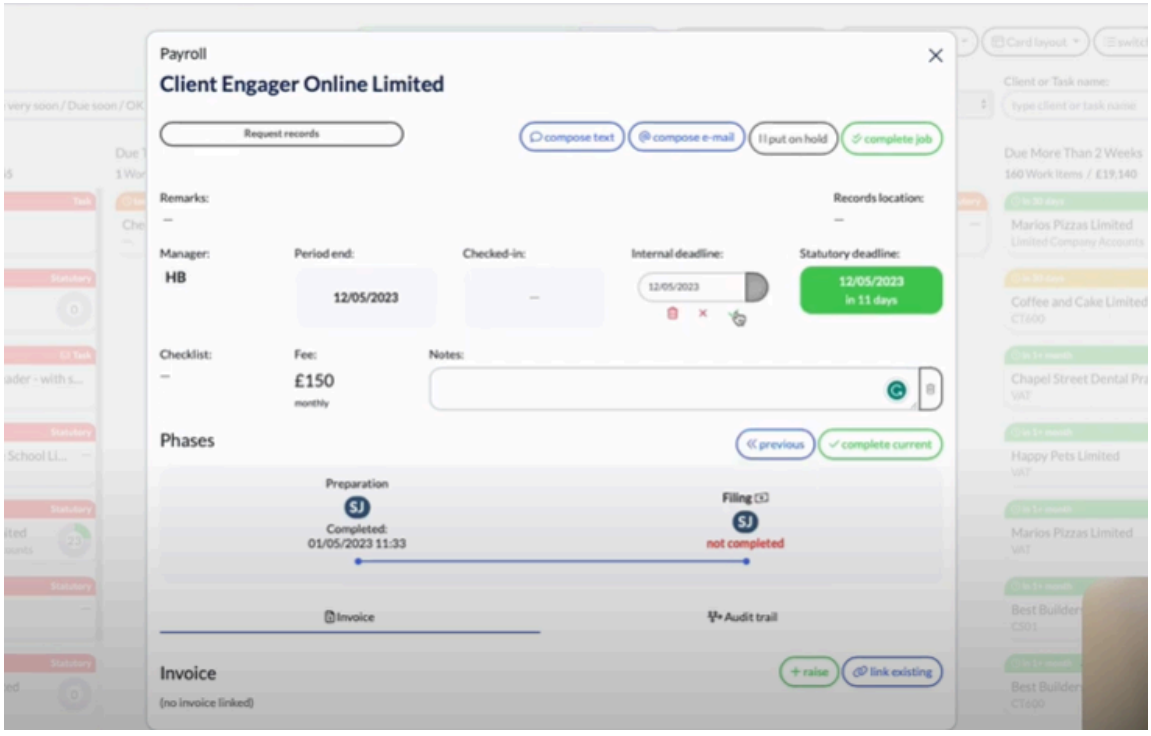

- We have different “Group by options” (see top row), we can group by:
    1. Staff member
    2. Department
    3. Job type
    4. Status
    5. Week
    6. Due period
    7. Due state

- Group by staff member::
- 

- Group by week:

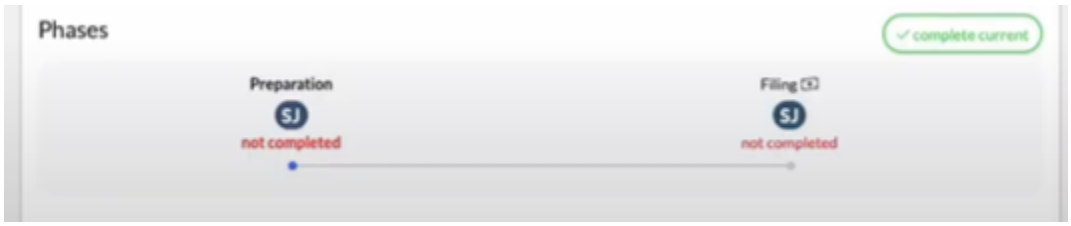

- 

- We can also tailor the cards to only show the information that we want to see by clicking on this option (in the top row):
- 

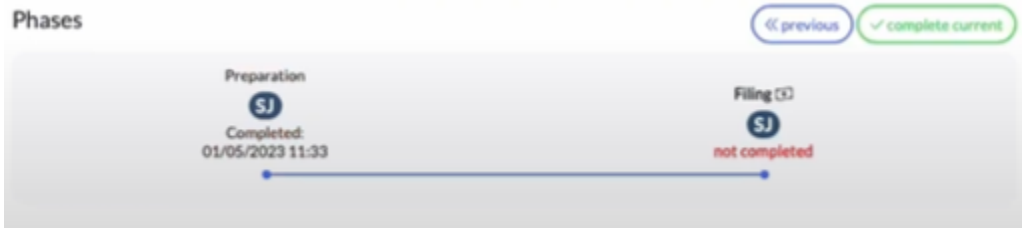

- When we click on a task, the task popup opens up:
- 

- We can set internal deadlines (separate from official/external deadlines)
- We can save notes (See notes input on the popup).
- We can click on “Audit trail” and it shows a timeline of changes to the task:

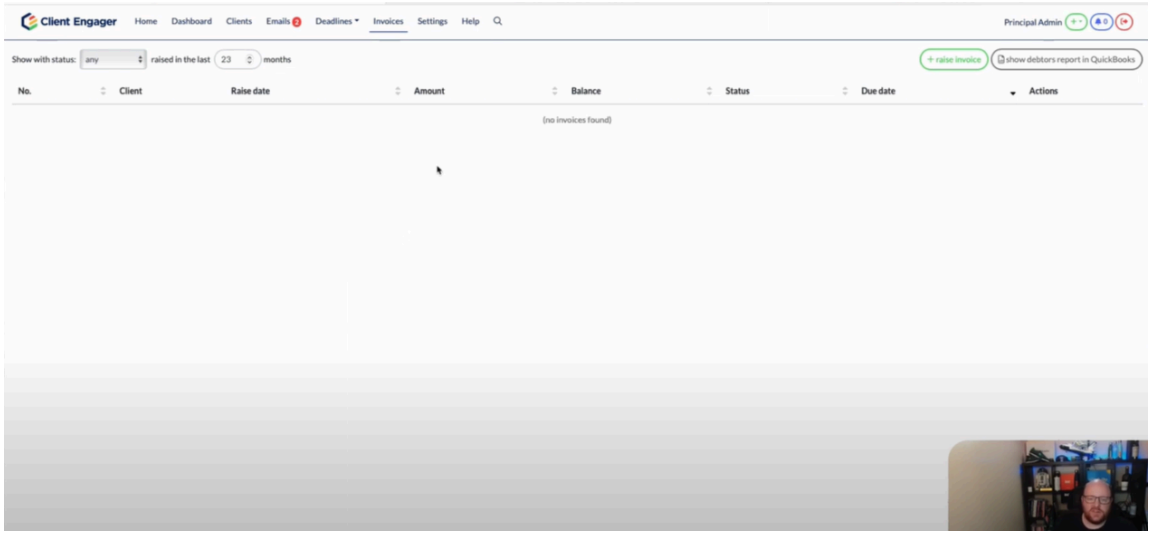

- 

- This is the phases timeline on the task popup, it shows us the phases in the task, which one we’re at, and which ones are left. We can click “Complete current” and it takes us to the next phase.

- **—-INVOICES PAGE—-----**
- If we have linked to quickbooks, this page shows us a list of all of our invoices.

- 

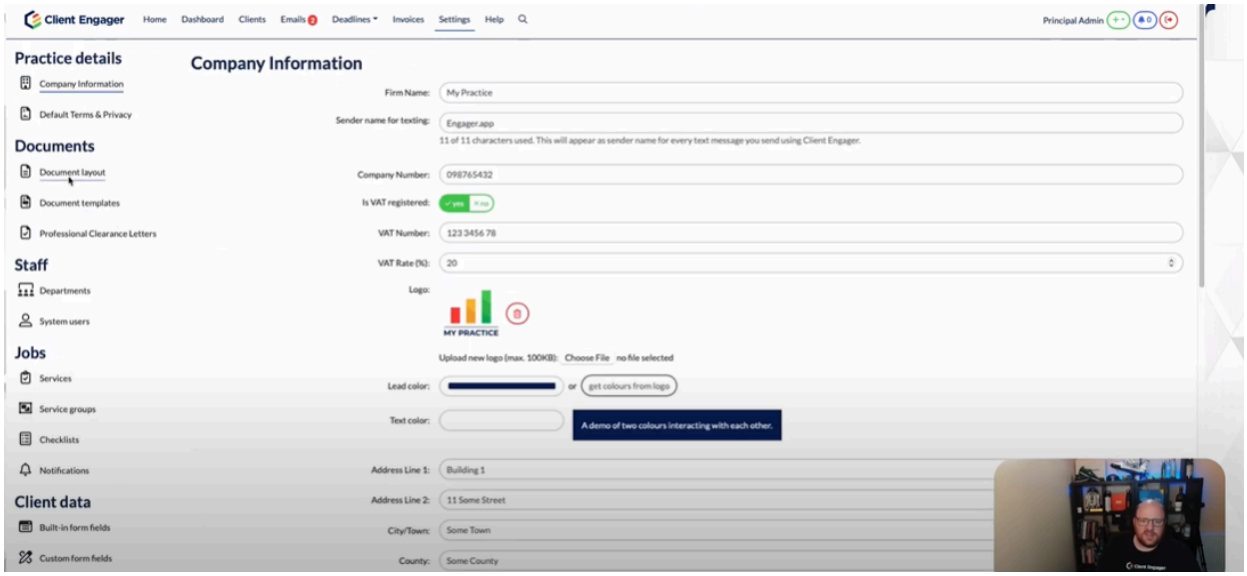

- **—--SERVICES PAGE—---**
- **List of options available:**

1. **Practice details**
    - Company information
    - Default terms & privacy
2. **Documents**
    - Document layout
    - Document templates
    - Professional clearance letters

    - Email
    - Texting
    - Buy texts
7. **Portal**

- General settings
- Folder templates
- File name templates

8. **Integrations**
    - Each integration has its own settings section
9. **Application**
    - Subscription
    - Info

The actual page looks like this:

- **— HELP PAGE —**
- The purpose of this page is to act as a guide for when users get stuck on something and need guidance.
-
